WHAT IS CRUCIFIXION

What is crucifixion? What Jesus went through for us. A medical doctor provides a physical description:

The cross is placed on the ground and the exhausted man is quickly thrown backwards with his shoulders against the wood. The legionnaire feels for the depression at the front of the wrist. He drives a heavy, square, wrought-iron nail through the wrist deep into the wood.

Quickly, he moves to the other side and repeats the action, being careful not to pull the arms too tightly, but to allow some flex and movement. The cross is then lifted into place. The left foot is pressed backward against the right foot, and with both feet extended, toes down, a nail is driven through the arch of each, leaving the knees flexed. The Cross is raised and falls with a mighty jerk into a hole in the ground. The victim's shoulders are immediately dislocated with excruciating pain as he begins his crucifixion.

As he slowly sags down with more weight on the nails in the wrists, fiery pain shoots along the fingers and up the arms to explode in the brain - the nails in the wrists are putting pressure on the median nerves. As he pushes himself upward to avoid this stretching torment, he places the full weight on the nail through his feet.

Again he feels the searing agony of the nail tearing through the nerves between the bones of his feet. As the arms fatigue, cramps sweep through his muscles, knotting them deep relentless, and throbbing pain. With these cramps comes the inability to push himself upward in order to breathe. Air can be drawn into the lungs but not exhaled. He fights to raise himself in order to get even one small breath out.

Finally, carbon dioxide builds up in the lungs and in the blood stream, and the cramps partially subside. Spasmodically, he is able to push himself upward to exhale and bring in life-giving oxygen.

Hours of limitless pain, cycles of twisting, joint-renting cramps, back muscles pulled and stretched like putty, intermittent partial asphyxiation, tissue torn from his lacerated back as he moves up and down against rough timber, and there is

no end to his searing pain.

Then another agony begins: a deep, crushing pain deep in the chest as the pericardium slowly fills with serum and begins to compress the heart. It is now almost over. The loss of tissue fluids has reached a critical level. The compressed heart is struggling to pump heavy, thick, sluggish blood into the tissues. The tortured lungs are making frantic effort to gasp in small gulps of air. He can feel the chill of death creeping through his tissues.

Finally, he allows his body to die.

All this the Bible records with the simple words, "and they crucified Him" (Mark 15:24).
